DYNAPRO SLIDE SYSTEM

The powerful precision drawer slide
for absolute design freedom.

DYNAPRO SLIDE SYSTEM

Room for new ideas.

Colours, forms, surfaces, textures and materials – these are the ingredients for modern furniture design. Dynapro, the new undermount slide system from GRASS offers not only perfect movement but above all absolute design freedom when it comes to individual furniture concepts. Why not find out for yourself?

reddot design award
winner 2010

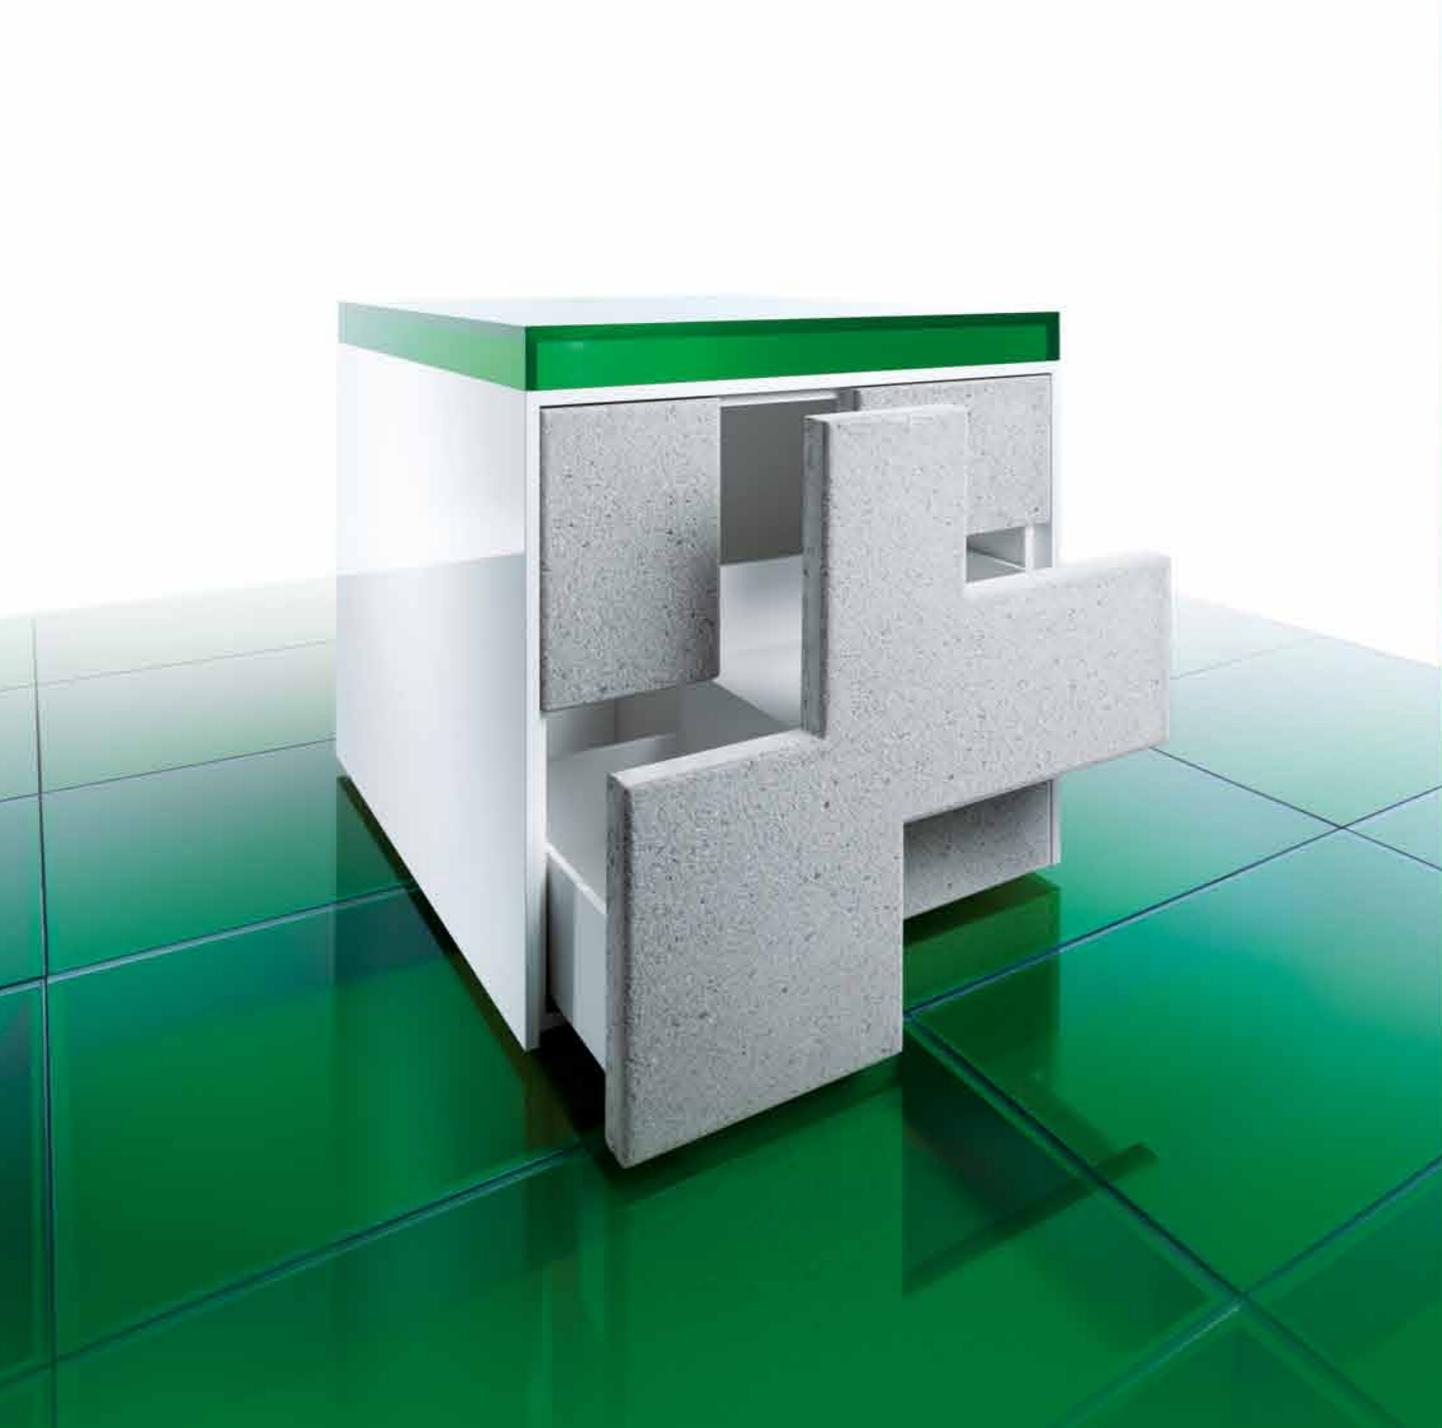

Rarely has the wish
come so close to reality.

High load capacity. Synchronised movement. 3D adjustment.
**The multitude of special qualities makes Dynapro a unique
movement system for individualists.**

If you prefer unusual design and expect a undermount drawer
slide to offer excellent running performance, high stability, precision
and exceptional operating comfort – then Dynapro is exactly right
for you.

With Dynapro, furniture designers can give free rein to their
creativity. Handle-free surfaces, high fronts, wide drawers or
unusual materials – the new generation of slides for full drawer
extension offers unlimited design possibilities.

Concealed functionality for the utmost in individuality.

Innovating means adopting new approaches. That applies just as much to the creation of new furniture designs as it does to the development of new movement systems. The more offbeat the idea, the more vital it becomes to have intelligent function characteristics.

To cater for even the most exceptional requirements, GRASS has developed a completely new slide system that combines concealed functionality and outstanding running performance. For furniture designers, this opens up entirely new perspectives:

Whether it's wood, aluminium, glass, natural stone or concrete – let Dynapro provide the inspiration for new ideas.

Synchronisation for excellent running performance.

Smooth operation without a sound.

Unlike conventional undermount slide systems, Dynapro is the only fitting worldwide that features a synchronisation mechanism. Thanks to the mechanically synchronised slide rails, the Dynapro slide system moves without any annoying noise or resistance. Even under high load, the excellent running performance of Dynapro remains unchanged. Load forces of up to 60 kg present no problem for the system. Abrasion-resistant plastic rollers ensure a smooth, even glide every time.

“What is visible defines the form of a piece.
But what is invisible constitutes its value.”
Lao Tse

It's nice when all it needs is a
slight tug.

**Comfort is a question of
technology. Sounds logical.
And it is.**

The amount of force needed to open a drawer – that's how you recognise a technically mature function system. And here again, Dynapro impresses with optimal values.

When Dynapro closes, the tried and tested Soft-close damping system provides a gentle closing comfort which makes it a joy to operate.

Precision in three dimensions:
Height, side and front tilt adjustment
for perfect alignment.

Dynapro is the first undermount slide system worldwide with an integrated, three-dimensional adjustment facility. The entire drawer can be adjusted vertically and horizontally as well as in its tilt angle. While long a standard feature on double-wall drawer systems such as “Novapro” and “DWD XP”, this is the first time that 3D adjustment has been fully adapted to a undermount drawer slide.

All adjustments are tool-free, readily accessible and easy to handle. In short, it takes just a few tweaks to achieve optimal alignment.

Three options for the utmost operating comfort.

The appeal of modern furniture lies in its large, calm surfaces and puristic elegance. To complement this trend, Dynapro offers two innovative opening systems: Tipmatic Plus and Sensomatic.

The fact that Dynapro really can offer maximum functional variability is due to its compatibility with all GRASS comfort systems.

Soft-close, the successful damping system, closes Dynapro drawers gently and quietly. With the mechanical opening system Tipmatic Plus, it is possible to design large handle-free fronts that will open with a slight touch. And with the electro-mechanical opening system Sensomatic, Dynapro drawers open as if by magic.

In combination with these extraordinary movement systems, Dynapro guarantees a maximum of operating comfort.

Out of sight, elegant and comfortable.

To satisfy the highest expectations in terms of operating comfort, stability, quiet movement and load capacity:

Dynapro, the new precision drawer slide from GRASS, offers top-quality functional variability for individual drawer design in all living spaces.

DYNAPRO SLIDE SYSTEM

Extremely useful if you like a tidy arrangement: GRASS dividing and organising systems for optimal use of the available space.

Neat, practical, versatile and flexible. GRASS dividing and organising systems don't just look good, they make life easier and help to keep drawer contents tidy.

From variable length and width divisions, and stabilising railing systems to dishwasher-safe stainless steel modules - the range caters for every wish and creates space for up to 30% more volume.

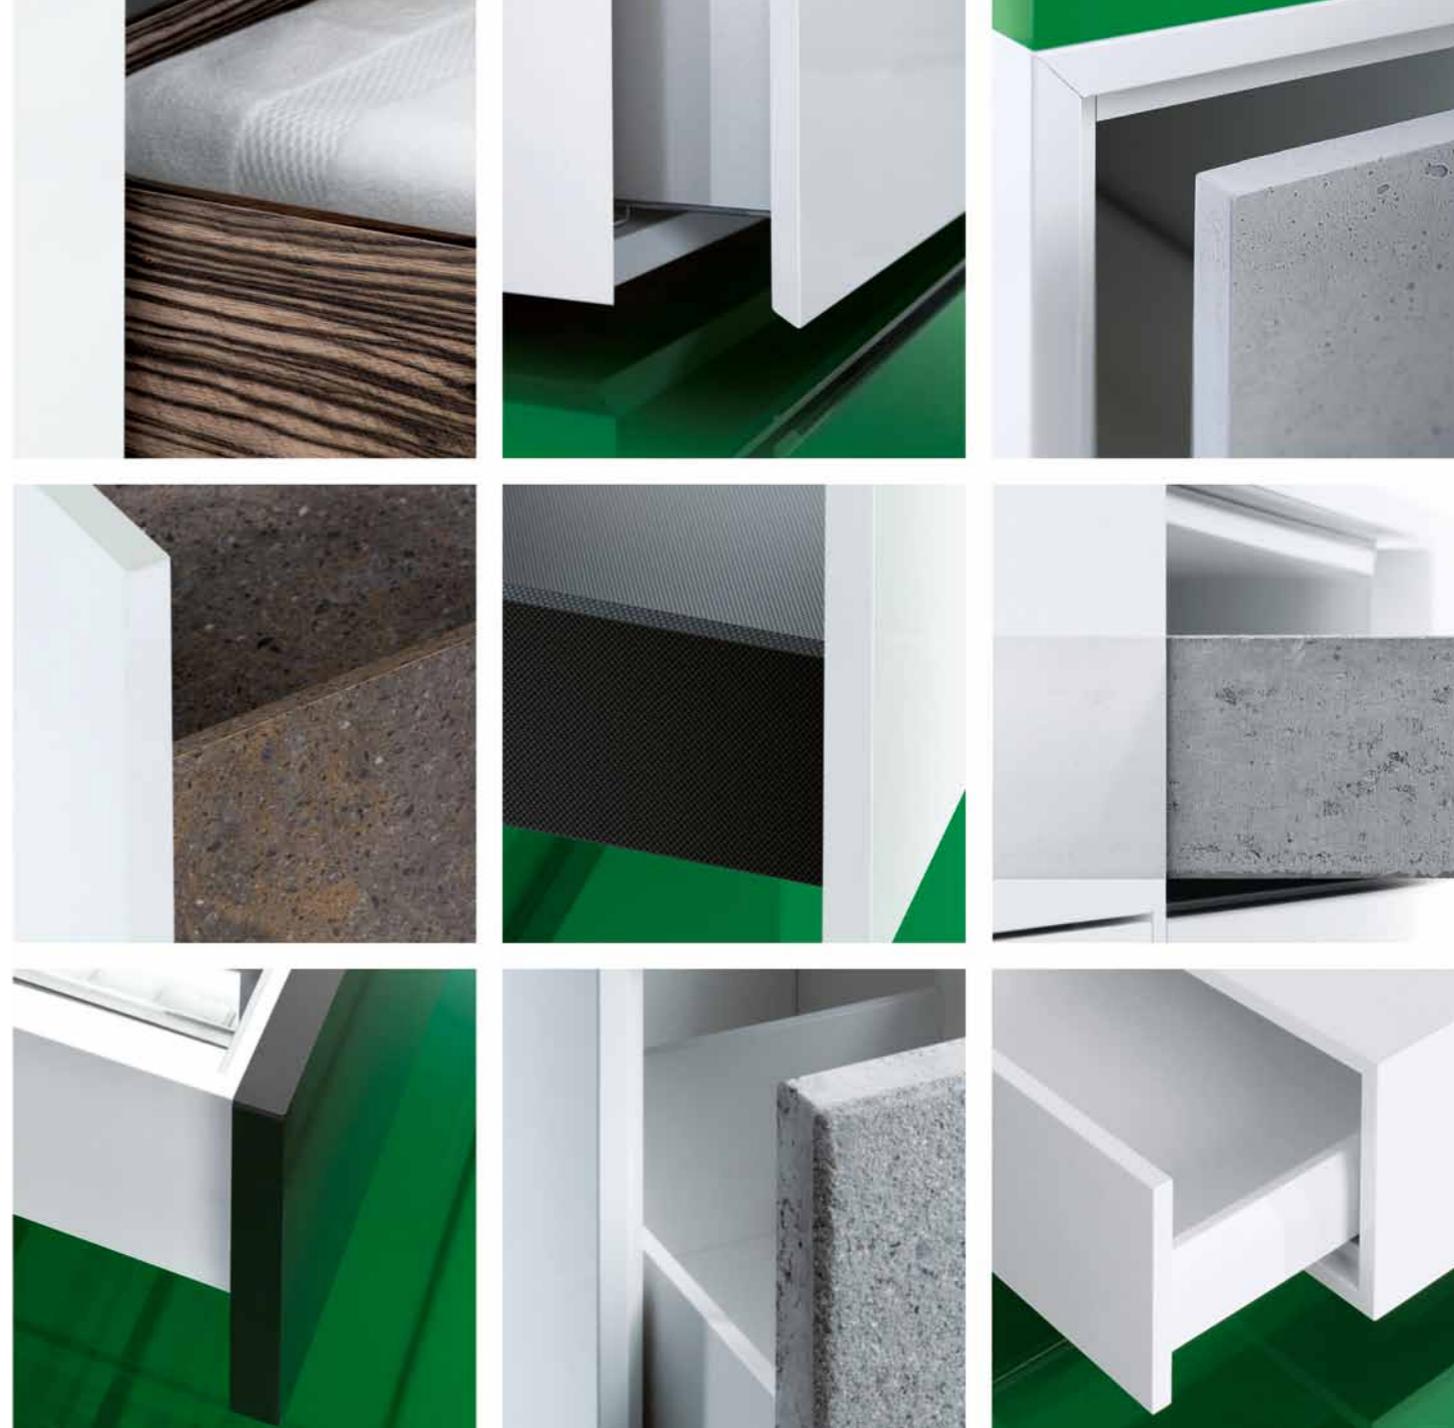

Two movement systems with special characteristics: Dynapro and Dynamoov.

The range of special features of GRASS concealed slide systems makes them the highly efficient movement systems of the future. Because with the strong Dynapro and Dynamoov precision slides it is possible to meet nearly all functional, comfort and design requirements.

FUNCTIONS	DYNAPRO	DYNAMOOV
30 kg load rating	-	■
40 kg load rating	■	-
60 kg load rating	■	-
Full-extension drawer for optimal access	■	■
Synchronisation without mid-way knock	■	■
