

GLOSS

The key characteristic of a gloss finish is its shine, which gives your project a sophisticated and classy feel. Gloss finishes reflect light due to their smooth polished surface, which can help make smaller spaces feel larger.

The only downside to a gloss finish is that fingerprints and dirt are more easily seen (more so with dark colours), but they are easily cleaned with a non-abrasive cloth and cleaning solution.

A semi-gloss finish fits in between a gloss and satin finish. It is similar to satin but it has a much higher sheen. As it is quite reflective it can help to reflect light in the room, but this can also make smudges and dirt appear more visible than on a satin finish, however a semi-gloss finish is easily cleaned.

SEMI- GLOSS

SATIN

A satin finish has a low sheen and is our most popular finish. A satin finish reflects less light than a semi-gloss finish but more than a matte finish, and it is very easy to clean. This finish is great for high-traffic areas such as kitchens, bathrooms and children's rooms.

MATTE

A matte finish delivers a smooth, subtle look and has a very low sheen. Since matte paint reflects only a very small amount of light, fingerprints, dirt and scratches are less noticeable than on the other finishes. Since the matte surface is not as smooth as the other finishes it can be a bit harder to clean, but it is not difficult.

TEXTURE

A texture finish has a rough feel compared to the other finishes, and can look and feel very similar to vinyl. This finish is achieved by including texture particles in the paint, and is recommended to be used with matte or satin paint only. Due to the non-smooth finish, panels can hold dirt and dust and are more difficult to clean.
