

HANDY HINTS

For the repair of small chips, scratches & imperfections

For the repair of small chips, scratches and imperfections.

Simply apply Liquid Laminate to the damaged area with the brush provided. For larger damage fill and repair first with 'Plasti Bond' or a similar (Bog) product, then paint over with Liquid Laminate.

If a texture is required simply dab with a sponge or cloth before dry.

Liquid Laminate darkens as it dries, so please allow time to dry properly (Approx 12 hours) for a true colour match. If required, you can speed up the process by applying GENTLE heat from a heat gun or hair dryer.

To improve appearance of laminate joints

Simply rub Liquid Laminate into the joint and wipe off excess before it's dry with a damp cloth (not wet) or allow Liquid Laminate to dry, then remove excess with thinners on a clean cloth. Repeat process if necessary. This is really good for making bench top joints look great.

Colour your own sealers

Liquid Laminate will mix with acrylic based sealers like 'No more gaps' etc, simply adding a few drops to your sealer as a tinting agent, then mix and apply with a spatula.

NEW Liquid Laminate CLEAR

'Clear' is a new product we have introduced (due to customer requests) which can be applied over our colours to attain a GLOSS finish or simply repair damage to any gloss surface.
